

João Bernardo

My journey is marked by a variety of interests and hobbies that keep me engaged and excited. I see myself as a young, curious, up-for-the-challenge person, with a proactive and responsible mindset, together with a deep interest in setting and achieving new goals for personal and professional growth.

Currently, my primary focus is to kickstart a career as a junior developer. This represents a significant shift for me, but I've been actively improving my technical skills with essential tools to confidently take on this new challenge.

Experience

OutSystems Developer trainee, ITup Boot Camp

Sep 2023 - Nov 2023

I've enrolled in the ITup boot camp, a guided reskill program. This immersive and hands-on learning experience provided me with a framework filled with relevant content with a focus on mastering the fundamentals of development using the OutSystems Platform.

In addition, I've been expanding my skill set by acquiring more knowledge in CSS, SQL, and HTML, to improve my ability to work with these languages as, for me, this complements my knowledge of the OutSystems Platform, enhancing my overall development capabilities.

//HTML //CSS //SQL //Reactive Web Development //OutSystems Development //Agile Methodologies

Boot Camp Projects

SchoolUp, OSMDb, Bookings, TravelUp, FamilyUp - web applications

Description

A collection of projects that were developed to deliver as final projects in each module during the boot camp.

Tools and Technologies

- **Service Studio** - IDE used for development

Other Projects

Field Flow - web and mobile applications

Description

This project's scope was to create an application so that our clients could book sports fields in different locations and at different times.

It was a project that I embraced from the start and in which I took on new tasks unrelated to development. My main concerns during the initiation week were, together with the project manager, to meet with the client and run a set of questions to better understand their needs.

To clarify the process, I worked on process diagrams and created personas. I also designed wireframes, the project architecture, and the data model to ensure a solid foundation for what was to come.

Tools and Technologies

- **Service Studio** - IDE used for development
- **Agile** - applied agile methodologies and drove ceremonies to ensure a well-directed and organized workflow throughout the project
- **JIRA** - developing and managing the backlog with user stories and sprint planning
- **REST** - consumed RESTapi's from IPMA to get the weather forecast in the location of the different fields
- **Architecture Canvas** - applied the three-layer canvas to design the project architecture;
- **Gherkin** - used Gherkin syntax as one of the criteria to write the user stories, aligning them with the standards of the Definition of Done (DoD)
- **Balsamiq** - used to design wireframes
- **Canvas** - a tool used to design personas and process diagrams

Education

University of Évora

Bachelor of Science - Biology
2010 –2014

Portfolio Hub - web application

Description

A project of mine that serves as a living portfolio, showcasing my dedication to continuous learning and my desire to bridge the gap between low-code and traditional development.

Tools and technologies

- **Visual Studio** - IDE used for development (wanted to experience an IDE other than Service Studio)
- **HTML** - for the page structure
- **CSS** - for overall styling
- **JavaScript** - managing page visibility and handling a form pop-up
- **GitHub** - host and share my webpage

My Outsystems Pastry - web application

Description

I've created a library of OutSystems content, including what I've used and a list of things I still plan to implement. The ultimate goal is to create a simple and detailed platform to share with the OutSystems community, designed to help other junior developers improve their skills and also to allow senior developers to give feedback so that I can improve my code.

Tools and technologies

- **Service Studio** - IDE used for development
- **Service Center** - manage site properties
- **Life Time** - manage security features and errors
- **JavaScript** - change the accordion widget behavior
- **REST** - integration with IPMA (used in the FieldsFlow project), Marvel Universe to get a list of characters and Chuck Norris facts, just for fun
- **SOAP** - integration with a web service to get a list of countries and their information

LeetCode Lab - web application

Description

A web application that I've created to implement the logic to solve Leetcode algorithm problems as the LeetCode website doesn't provide a structure for the OSL.

Tools and Technologies

- **Service Studio** - IDE used for development

Employee directory - web application

Description

This was an application that I developed to finish the 'Outsystems Developer Journey'. It was important because I decided not to follow the guided paths and almost didn't use accelerators during development. I've created everything from scratch, screens, sorts, pagination, logic, blocks, modeled the database differently, and so on. Added features that weren't asked to practice or just that made sense to me. So the final app had all the requested features plus the ones I've added with a personal touch.

Tools and technologies

- **Service Studio** - IDE used for development
- **SQL** - fetch employees who do not have any project-associated

Employement history

Site Project Manager, Domman Group

Jul 2022 – Jul 2023

My main responsibility was to ensure the safe, timely, and cost-effective completion of construction projects. With an emphasis on maintaining safety protocols, supervising construction teams, and strategic resource management, my experience consisted of overseeing projects from conception to completion. My commitment to quality, safety, and efficiency was directly bound to my client's needs where I've addressed their concerns and provided regular progress reports during all construction stages.

Project Manager- Digital Transformation, Decathlon

Jan 2021 – Jul 2022

As the Digital Transformation Project Manager at Decathlon, I led the implementation of the "phygital" concept, transforming physical stores into a dynamic digital sales platform. This approach's main scope was to foster a seamless omnichannel experience, connecting our team with customers and boosting e-commerce sales. Additionally, I managed the "On-site live chat" team, ensuring optimal performance and regularly reporting on digital sales growth and live chat effectiveness. My role also involved setting clear directions, implementing strategies, and evaluating outcomes to drive departmental goals.

Store Operations Manager, Decathlon

2016 – 2021

As the Operational Manager for Decathlon, I was responsible for developing and implementing budget plans to enhance workflow and productivity within the Business Unit. My role extended to conducting operational audits, ensuring store infrastructure safety, and managing the security of both staff and customers by establishing daily tasks for employees to create a clean and safe workplace. Additionally, my responsibilities included problem-solving, conflict resolution, supply and stock control, implementation of merchandising policies, and overseeing compliance with company policies and procedures.

//Problem-Solving and Conflict Resolution //Merchandising Policies //Interdepartmental Coordination
//Compliance Oversight //Supply and Stock Control

Department Manager, Decathlon

2016 – 2021

In this role at Decathlon, my main responsibility was to achieve and surpass sales targets, optimize supply performance, and capture local market share. My focus on team performance included providing targeted training to develop my team skills in a multitasking environment. Through recruitment, onboarding, performance management, and team-building initiatives, I ensured a dynamic and motivated work environment to keep achieving key business objectives.

Call Center Agent, Contact

2013 – 2014

In this role, I played a part in addressing customer inquiries and providing solutions across Vodafone, MEO, and EDP energy campaigns. By focusing on achieving performance goals and maintaining proper customer follow-up, I contributed to the overall satisfaction and positive interactions between customers and the company.
